Live – Swig – Dye Funshop

Live Dye is dedicated to providing participatory entertainment focused on creativity and fun. Our Funshops are performed on-site at client businesses, drawing in new and old customers in an engaging fabric art workshop. We use both dye and discharge (bleaching) techniques, simple in execution and suitable for all ages and abilities but yielding complex and beautiful results.

Client Requirements

- A well-ventilated and uncarpeted or outdoor space approximately 20' x 30'
- Access to the sanitary sewer (we can pump our rinse water up as much as 30'). For businesses with a septic system, we can collect and haul our waste water offsite for appropriate, responsible disposal.
- Access to a hose outlet (we use between 1-200 gallons of water)
- Access to a 110 V outlet (we use approximately 200 W in lighting)

We prefer space that is included in your license so participants can enjoy your brews while working. Indoor space must be well ventilated, and preferably have outside access that allows us to put our propane-heated dye and discharge pots outside.

We primarily use discharge agents (bleaches), which do not stain. Our vat dyes can stain concrete or porcelain, so the access to the sanitary sewer should be through a floor drain or similar. The volumes and composition of the rinses and dye baths are suitable for discharge into the sanitary sewer (but not onto the ground or into storm drains).
